.NET
C#
C/C++

Additional requirements for the candidate

Core skill set

You should have profound knowledge of .NET server and client development (at least three years working experience). You are well experienced with relational databases such as MS SQL, Oracle and operative systems such as Windows and Linux.

It is a plus if you have earned in-depth application integration skills with web services. You probably know version control management systems such as CVS and Subversion.

You have created your own XML schemas, used related API's and you know your way around web services.

You have the ability to write clear and concise specifications and to explain technical ideas and designs to your colleagues and management.

You are able to solve problems independently and can stay focused with a project from specification to end user acceptance while being quality minded.

You have a proven record of delivering software products

You are fluent in English, both in writing and orally.

If you can speak German it is a plus.

Brief description of the company
