

enprovia® mDMS – Mobile Documents Value Everywhere

Easy and smart access to your company's documents and knowledge base.

Challenge

- Access all your company documents whenever and wherever you are.
- Find relevant documents quickly and easily.
- Be confident you always have the latest version of a document available.
- Get real time information about any important change to a document.
- Read documents offline, e.g. if needed more frequently or files are too large.
- Secure your offline files from unauthorized reading.

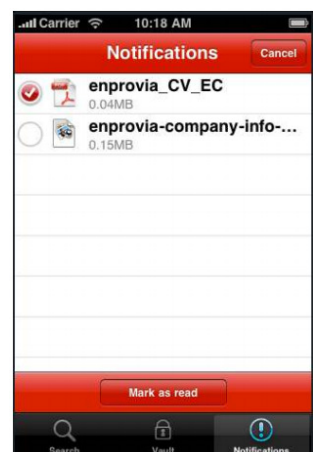

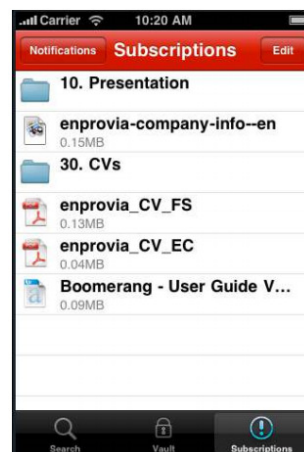

Features

- Search and navigate through folders (dossiers / matters) and documents located in your Document Management Systems (DMS).
- Instantly find the relevant documents for your current task, based on folders, document title, or full text search.
- Mobile vault: Encrypts and stores downloaded documents (password secured) to safely work offline.
- All detailed properties of documents and folders are made available.
- One-click subscription to be notified of changes to a document or a folder including any information they contain.
- Real-time notification about any modifications of documents.

Benefits

- **Saves time:** Instantly finds and presents relevant documents for your current task, based on folders, document properties or full text.
- **Increases quality:** No more decisions based on outdated information.
- **Always on:** Compatibility with most smart phones ensures you have access to all sources of information at your fingertips.
- **Protects all secrets:** Even if your mobile device is stolen, your company data is secure – stored encrypted in the local memory.

Solution

- The client application connects to the Mobile Enabler server via a standardized, optimized and encrypted protocol.
- The server takes care of session management, notification, and connects to the different DMSs via individual connectors.
- The plugin-based connectors allow rapid additional support for other DMS's on request.

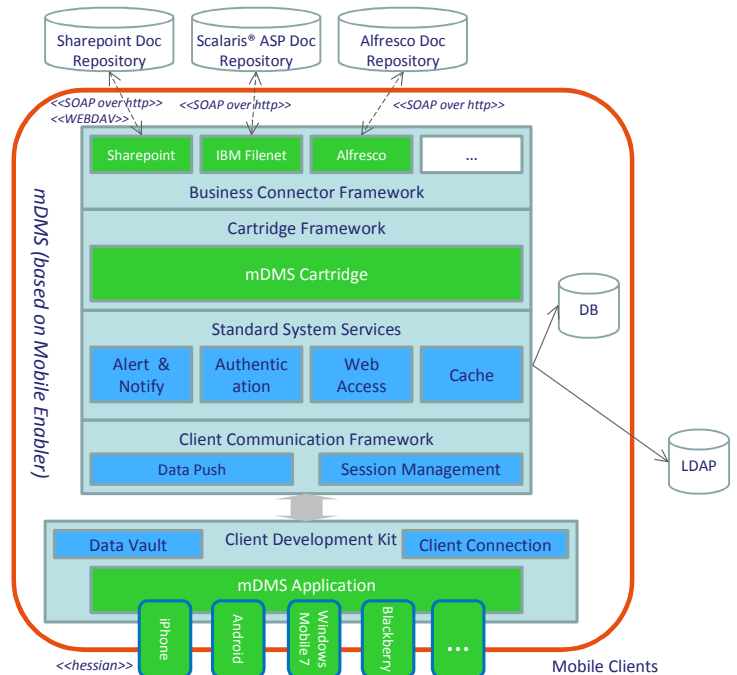

Technical Requirements

- mDMS is available for any Windows or Linux/Unix operating system
- Java RE 1.5 or higher
- Supported Document Management Systems: Scalaris® ASP, Alfresco®, Microsoft Sharepoint®, Basically any DMS with WebDAV support

Details

Platform independent. Based on Java technology with Mobile Enabler you have full freedom to use the server platform of your choice.

Database independent. The flexible database layer enables you to use any of the common database systems.

Easy installation. Just search "mdms by enprovia" in the App Store on your iPhone or iPod and install the app.

Easy setup. You just need to enter the URL of your mobile enabler and off you go.

Subscriptions. If you are subscribed to a folder, any changes to the folder itself, plus any changes done to any sub-folders or documents kept in the folder will be sent to you as a notification.

Notifications. As long as your iPhone is powered on, you will see the notifications as a number beside the enprovia® mDMS application icon. If you have the application already open and running, you will see the number of notifications to the right of the Notifications icon on the black, bottom bar.

Trial & download. To get the latest information and download your free trial software please visit <http://www.enprovia.com/mdms/>
